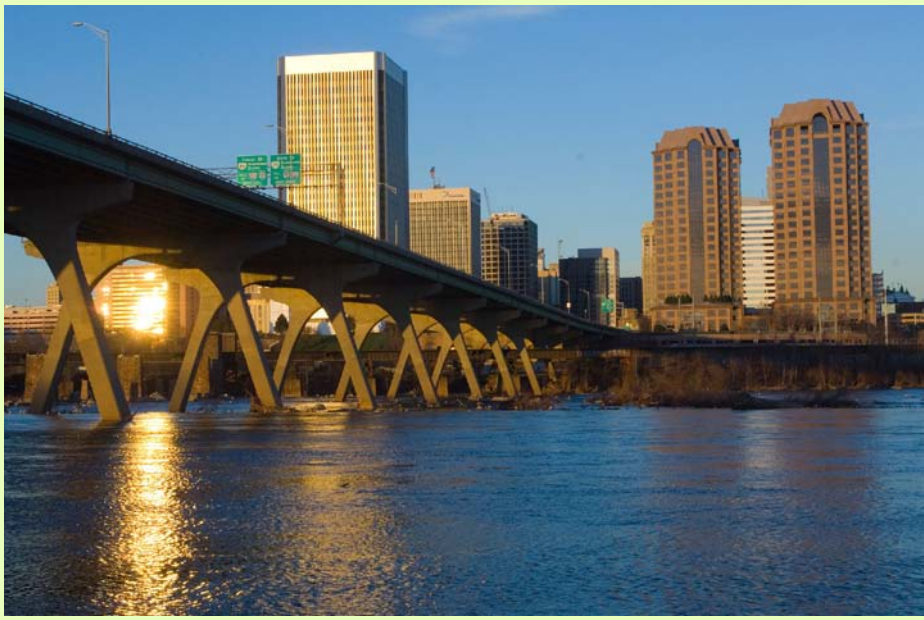
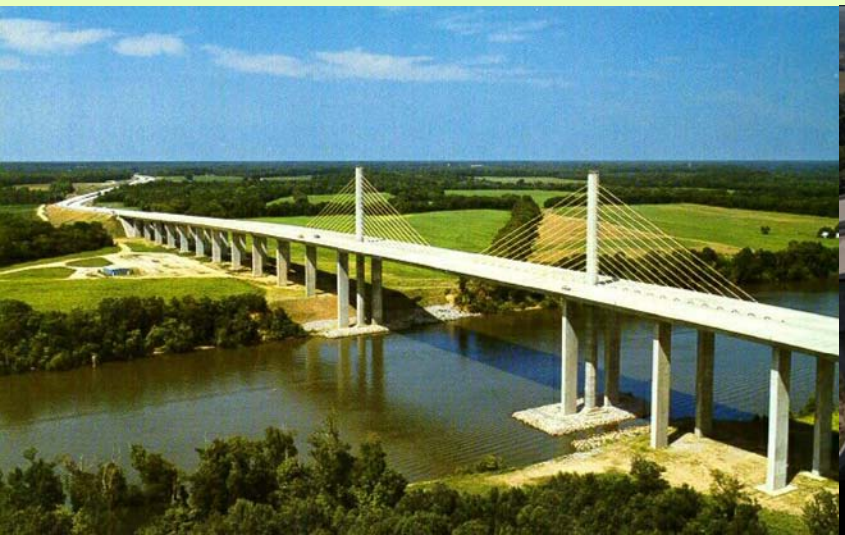
Richmond Regional Bridge and Culvert Inventory & Structural Assessment Report 2015 Update



RICHMOND AREA



ACKNOWLEDGMENTS

This report was prepared by the Richmond Regional Planning District Commission (RRPDC) staff through a cooperative process involving the City of Richmond, Counties of Charles City, Chesterfield, Goochland, Hanover, Henrico, New Kent, Powhatan , and the Town of Ashland, the Virginia Department of Transportation (VDOT), the Virginia Department of Rail and Public Transportation (DRPT), the Virginia Department of Aviation, the Capital Region Airport Commission, GRTC Transit System, the Richmond Metropolitan Authority, the Federal Highway Administration (FHWA), the Federal Transit Administration (FTA), the RRPDC and RideFinders, Inc., on behalf of the Richmond Area Metropolitan Planning Organization (MPO). The contents of this work program reflect the views of the MPO. The RRPDC staff is responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official views or policies of the FHWA, FTA, VDOT, DRPT or the RRPDC. This document does not constitute a standard, specification, or regulation. FHWA, FTA, VDOT, or DRPT acceptance of this document as evidence of fulfillment of the objectives of this work program does not constitute endorsement/approval of the need for any recommended improvements nor does it constitute approval of their location and design or a commitment to fund any such improvements. Additional project level environmental impact assessments and/or studies of alternatives may be necessary.

NONDISCRIMINATION

The Richmond Area Metropolitan Planning Organization (RAMPO) fully complies with Title VI of the Civil Rights Act of 1964 and related statutes and regulations in all programs and activities. The RAMPO will strive to provide reasonable accommodations and services for persons who require special assistance to participate in this public involvement opportunity. For more information on meeting accessibility, or to obtain a Title VI Complaint Form, see www.richmondregional.org or call the Title VI Coordinator at 804-323-2033.

NO DISCRIMINACIÓN

Aviso de Título VI abreviado al público: RAMPO cumple plenamente con Título VI de la ley de Derechos Civiles de 1964 y con estatutos relacionados en todas programas y actividades. El RAMPO se esforzará por proporcionar alojamiento y servicios razonables para las personas que requieren asistencia especial para participar en esta oportunidad de participación pública. Para más información sobre accesibilidad de la reunión o para obtener los documentos de reclamación de Título VI, por favor visita www.richmondregional.org o llama el Coordinador del Título VI en 804-323-2033.

TPO AGENDA 12/3/15; ITEM III.A.

RICHMOND REGIONAL BRIDGE AND CULVERT INVENTORY & STRUCTURAL ASSESSMENT REPORT

Richmond Regional Transportation Planning Organization

On motion of James H. Burrell, seconded by Patricia S. O'Bannon, the Richmond Regional Transportation Planning Organization (RRTPO) unanimously approved the following resolution:

RESOLVED, that the Richmond Regional Transportation Planning Organization (TPO) accepts the *Richmond Regional Bridge and Culvert Inventory & Structural Assessment Report 2015 update* as work complete; and

BE IT FURTHER RESOLVED, that the TPO directs staff to work with TAC and VDOT Richmond District staff to develop a regional bridge replacement and rehabilitation strategy for TPO review that would include a methodology for prioritizing regional bridge needs, identify a prioritized list of bridge needs, and identify funding strategies to address the infrastructure investment needs.

****

This is to certify that the Richmond Regional Transportation Planning Organization (TPO) approved the above resolution at its meeting held December 3, 2015.

WITNESS:

Sharon E. Robeson
Administrative Secretary
Richmond Regional Planning
District Commission

Executive Summary

Bridges and culverts are an important part of any regional transportation systems. Due to the presence of many rivers like the James River, Pamunkey River, Chickahominy River, Appomattox River and South Anna River and numerous creeks and streams in the Richmond Region there are many bridges (and culverts) in the Richmond Region. Similarly, due to the presence of an integrated network of highways including Interstates 64, 95, 195 and 295, freeway Routes 76, 150, 288 and 895 and many other state and US highways there are many elevated (grade-separated) interchanges. The condition of these structures is key to the smooth flow of transportation in the Richmond Region.

The Richmond Regional Bridge and Culvert Inventory & Structural Assessment Report 2014 was the first attempt of the Richmond Regional Transportation Planning Organization (RRTPO) to provide inventory of all the structures in the region, and identify structures with poor conditions (structurally deficient, functionally obsolete, weight posted, etc.). The report also provided a list of structures eligible for federal bridge replacement funds and federal bridge rehabilitation funds.

This 2015 update of the Richmond Regional Bridge & Culvert Inventory & Structural Report builds on the previous report. This report is based on the snapshot of the data captured from VDOT's online dashboard as of January 15, 2015; exactly one year after of the snapshot data used in the 2014 Report.

In 2014, 1,414 structures were listed in the database. In 2015, 1,412 structures were listed. The difference in inventory is due to the fact that some structures get closed, some get replaced and some newly constructed. Out of the 1412 structures in the inventory 815 are bridges and 597 are culverts.

Bridges and culverts in the Richmond Region are owned and maintained by VDOT, various jurisdictions and other public and private agencies**.** VDOT owns and maintains around 85 percent of all bridges and culverts in the region. The City of Richmond and Henrico County own and maintain almost 10 percent of all bridges and culverts. Chesterfield County and Town of Ashland both maintain 1 culvert each. Local Tolling agency Richmond Metropolitan Transportation Authority (RMTA) owns and maintains about 33 bridges and culverts (2.3% of all structures). A few bridges are owned and maintained by the private sector. Transurban owns and maintains 34 bridges and culverts in Route 895 (including ramps). Private railroad agencies CSX Corporation and Norfolk Southern Railways own and maintain 4 bridges in total (3 by CSX and 1 by Norfolk Southern)

The median year a structure (bridge or culvert) was constructed (or undergo major reconstruction) in the Richmond Region is 1985, making the median age of the structures in the region as 30 years as of January 2015. Out of 1,412 structures in the Richmond Region, 64 structures (4.5%) built before 1950 have not gone through any major reconstruction work. The bulk of the bridges in the region were built from 1960 to 1990 (52%).

Structures are considered structurally deficient if they have been restricted to light vehicles, closed to traffic or require rehabilitation. Structurally deficient means there are elements of the bridge that need to be monitored and/or repaired. The fact that a bridge is "structurally deficient" does not imply that it is likely to collapse or that it is unsafe. In 2014, 109 structures were classified as structurally deficient structures and in 2015, 110 structures.

A functionally obsolete structure (bridge or culvert) is one which was built to standards that are not used today. These structures are not automatically rated as structurally deficient, nor are they inherently unsafe. Functionally obsolete bridges do not have adequate lane widths, shoulder widths, or vertical clearances to serve current traffic demand, or those that may be occasionally flooded. In 2014, 183 structures were classified as functionally obsolete structures and in 2015, 185 structures.

According to the Federal Highway Administration (FHWA) a structure is deemed "deficient" if the structure is rated either 'structurally deficient' or 'functionally obsolete'.

Sufficiency ratings were developed by the Federal Highway Administration to serve as a prioritization tool to allocate funds. The rating varies from 0 percent (poor) to 100 percent (very good). The formula considers structural adequacy, whether the structure is functionally obsolete and level of service provided to the public.

Deficient bridges with sufficiency ratings of less than 50 qualify for federal bridge replacement funds. In the Richmond Region, Structures eligible for federal bridge replacement funds have increased from 70 to 77 from 2014 to 2015.

Similarly deficient bridges with sufficiency ratings greater than 50 and less than or equal to 80 qualify for federal bridge rehabilitation funds. In 2015, in the Richmond Region 171 structures have been identified as deficient structures with sufficiency rating greater than 50 and less than 80.

The following summaries the findings of 2015 update of the Richmond Regional Bridge & Culvert Inventory & Structural Report:

- Total number Structures in the Richmond Region : 1,412
- Total number of Bridges : 815
- Total number of Culverts: 597
- Total number of Structurally Deficient Bridges: 110
- Total Number of Functionally Obsolete bridges: 185
- Total number of Deficient bridges: 295
- Median Age of Structures : 30 years
- Number of Structures eligible for Federal Bridge Replacement Funds: 77
- Number of Structures eligible for Federal Bridges Rehabilitation Funds: 171

Bridge & Culvert Definitions

Bridges and culverts are collectively called "structures". The National Bridge Inspection Standards (NBIS) published in the Code of Federal Regulations (23 CFR 650.3) give the following definition of a bridge:

"A structure including supports erected over a depression or an obstruction, such as water, highway, or railway, and having a track or passageway for carrying traffic or other moving loads, and having an opening measured along the center of the roadway of more than 20 feet (6.1 meters) between undercopings of abutments or spring lines of arches, or extreme ends of openings for multiple boxes; it may also include multiple pipes, where the clear distance between openings is less than half of the smaller contiguous opening."

Similarly, according to Report No. FHWA-PD-96-001 (Recording and Coding Guide for the Structure and Inventory of the Nation's Bridges) a culvert is defined as:

"A structure designed hydraulically to take advantage of submergence to increase hydraulic capacity. Culverts, as distinguished from bridges, are usually covered with embankment and are composed of structural material around the entire perimeter, although some are supported on spread footings with the streambed serving as the bottom of the culvert. Culverts may qualify to be considered "bridge" length."

National Bridge Inventory (NBI)

The National Bridge Inventory (NBI) is a database, compiled by the Federal Highway Administration (FHWA), with information on all structures in the United States that have roads passing above or below. The data is used to analyze bridges and judge their conditions. The bridge inventory is developed with the purpose of having a unified database for bridges, including identification information, bridge types and specifications (including geometric data) and operational conditions. Any bridge or culvert satisfying the definition of structure in NBIS as stated above and more than 20 feet (6.1 meters) long used for vehicular traffic is included in NBI. Those structures which are included in the NBI are called "NBI structures".

Similarly, a structure is referred to as a "Non-NBI structure" if it is a bridge with a clear span opening (as defined above) of less than 20 feet or a culvert with an opening of greater than 36 square feet but not meeting the definition of an "NBI structure" given above.

VDOT List of Structures

The Virginia Department of Transportation (VDOT) is responsible for the inventory and inspections of all structures across the state including bridges and culverts owned by VDOT and other jurisdictions, public agencies, and private entities (e.g. railroads, private toll roads, etc.). VDOT maintains an online dashboard showing the latest structure conditions by VDOT District. VDOT inspects and documents all

bridges regardless of their length and all culverts having an opening greater than 36 square feet. VDOT's list of structures contain both bridges and culverts, and both NBI structures and Non-NBI- structures.

Data Sources for the Report

The database of structures available online in the VDOT dashboard is the primary source for all data used in this report. The dashboard was accessed on January 15, 2015 and the excel spreadsheet for VDOT Richmond District was downloaded. A query was then done to select the structures located in the nine jurisdictions (Town of Ashland, Counties of Charles City, Chesterfield, Hanover, Henrico, Goochland, New Kent and Powhatan, and City of Richmond) of the Richmond Region.

The database has 1,412 structures listed in the Richmond Region. It includes 815 bridges and 597 culverts. The database includes 1,094 NBI structures and 318 Non-NBI structures. All analysis in this document is based on all the structures listed in the database. Table 1 shows the breakdown by the total number of bridges and culverts and also by NBI or Non- NBI structures.

Table 1: Culverts & Bridges in the Richmond Region

Type	Total	NBI Structure	Non-NBI Structure
Bridge	815	778	37
Culvert	597	316	281
Total	1,412	1,094	318

Mapping of the Structures

The bridges and culverts listed in the NBI, were mapped using NBI coordinates. VDOT database provides route name and crossing of the structure but does not provide the geographical coordinates (latitude and longitude) of the structure. In order to get the geographical coordinates, 2012 (the most current) NBI ASCII database file for Virginia (data is available by State) was retrieved from the FHWA website. This database was joined to the VDOT database using the Federal Structure Number. The Federal Structure Number is an identification information which addresses the bridge location uniquely and classifies the type of routes carried on or under the structure and locates the bridge geographically. The latitude and longitude data in the NBI database was then used to create point geography using ArcGIS and the points were then mapped.

For bridges and culverts which are not listed in NBI and for the newer structures built in or after 2012, the route name and crossing information provided in the VDOT database were used. The street maps and aerial photography provided by Google and Bing were used to locate the structure using the information provided by VDOT database. These structures were then manually created as point geography in ArcGIS and then mapped.

Staff was unable to map some very small bridges and culverts due to the lack of appropriate information. It was also hard to pinpoint some culverts using aerial photography due to the tree canopy. The mapping summary of the bridges and culverts in the Richmond Region is provided in Table 2.

Table 2: Bridge & Culvert Mapping									
Type	**Bridge**			**Culvert**			**Total Structure**		
Mapping Status	**NBI**	**Not in NBI**	**Total**	**NBI**	**Not in NBI**	**Total**	**NBI**	**Not in NBI**	**Total**

Unmapped	0	3	3	1	272	273	1	275	276
Total	778	37	815	316	281	597	1,094	318	1,412

Regional Bridge & Culvert Summary

Total Bridges & Culverts

The Richmond Region has a total of 1,412 bridges and culverts. The breakdown of the bridges by jurisdiction is shown in the table below.

Table 3: Total Bridges & Culverts

Jurisdiction	# of Bridges & Culverts
Town of Ashland	6
Charles City County	29
Chesterfield County	350
Goochland County	128
Hanover County	204
Henrico County	360
New Kent County	97
Powhatan County	47
City of Richmond	191
Richmond Region	**1,412**

Bridges & Culverts by Ownership

Bridges and culverts in the Richmond Region are owned and maintained by VDOT, various jurisdictions and other public and private agencies**.** VDOT owns and maintains around 85 percent of all bridges and culverts in the region. The City of Richmond and Henrico County own and maintain almost 10 percent of all bridges and culverts. Chesterfield County and Town of Ashland both maintain 1 culvert each. Local Tolling agency Richmond Metropolitan Transportation Authority (RMTA) owns and maintains about 33 bridges and culverts (2.3% of all structures). A few bridges are owned and maintained by the private sector. Transurban owns and maintains 34 bridges and culverts in Route 895 (including ramps). Private railroad agencies CSX Corporation and Norfolk Southern Railways own and maintain 4 bridges in total (3 by CSX and 1 by Norfolk Southern). Table 4 below lists the breakdown of bridges and culverts by ownership.

Table 4: Bridges & Culverts by Ownership

Ownership	# of Bridges & Culverts	Percentage of Total
Town of Ashland	1	0.1%
City of Richmond	79	5.6%
Chesterfield County	1	0.1%
Henrico County	65	4.6%
RMTA	33	2.3%
Transurban	34	2.4%
Railroad (CSX & NS)	4	0.3%
VDOT	1,195	84.9%
Total	**1,412**	**100.0%**

Maps 1 & 2 show the structures owned by VDOT and structures owned by other public and private agencies respectively.

Bridges & Culverts by Age

The median year a structure (bridge or culvert) was constructed (or undergo major reconstruction) in the Richmond Region is 1985, making the median age of the structures in the region as 30 years as of January 2015. Out of 1,412 structures in the Richmond Region, 64 structures (4.5%) built before 1950 have not gone through any major reconstruction work. The bulk of the bridges in the region were built from 1960 to 1990 (52%). The new millennium has seen the building of 316 new structures. Most of these bridges were built on new freeways (Routes 288 and 895). Some of these new bridges replaced the older ones.

Map 3 shows the locations of all structures built before 1950 in the Richmond Region.

Table 5 shows the breakdown of bridges and culverts built in the Richmond Region by decade built.

Structures by Highway System

In Virginia the highway system, for funding purpose is categorized as Interstate, Primary, Secondary and Urban system. Table 6 shows the number of culverts and bridges in each of these categories. Few of the newly constructed structures have not been categorized yet and have been listed as “unclassified”.

Table 6: Structures by Highway System

Highway System	# of Bridges	# of Culverts	Total Structures	Percentage of Total
Interstate	176	166	342	24.22%
Primary	291	179	470	33.29%
Secondary	269	200	469	33.22%
Urban	78	51	129	9.14%
Unclassified	1	1	2	0.14%
Total	**815**	**597**	**1,412**	**100.00%**

Bridge Inspection & Ratings

The Virginia Department of Transportation (VDOT) is responsible for the inventory and inspection of all bridges and culverts across Virginia, including bridges and culverts owned by VDOT and other jurisdictions, public agencies or private entities (e.g. railroads, private toll roads etc.). The bridges and culverts are inspected in accordance to the National Bridge Inspection Standards (NBIS).

Condition ratings are used to describe an existing bridge compared to its condition if it were new. The ratings are based on the materials, physical condition of the deck (riding surface), the superstructure (supports immediately beneath the driving surface) and the substructures (foundation and supporting posts and piers). Culverts have one element to inspect (the whole culvert,) unlike the bridges which have three (deck, superstructure and substructure). General condition ratings range from 0 (failed condition) to 9 (excellent). The VDOT Bridge Condition Code key is attached in the appendix for reference.

Structurally Deficient Bridges & Culverts

Bridges are considered structurally deficient if they have been restricted to light vehicles, closed to traffic or require rehabilitation. Structurally deficient means there are elements of the bridge that need to be monitored and/or repaired.

The condition of different parts of a bridge is rated on a scale of 0 to 9 (with 9 being “excellent” and zero being “failed”). A structurally deficient bridge is one for which the deck (riding surface), the superstructure (supports immediately beneath the driving surface) or the substructure (foundation and supporting posts and piers) are rated in condition 4 or less.

The fact that a bridge is "structurally deficient" does not imply that it is likely to collapse or that it is unsafe. To remain open to traffic, structurally deficient bridges are often posted with reduced weight limits that restrict the gross weight of vehicles using the bridges. If unsafe conditions are identified during a physical inspection, the structure must be closed.

As of January 15, 2015, 110 of the 1,412 structures (7.8 % of all structures) in the Richmond Regional are classified as structurally deficient structures. The City of Richmond has 29 structurally deficient structures making more than 15% of its structures structurally deficient. Powhatan County and New Kent County both have more than 10% of its structures are designated structurally deficient.

95 of 109 structurally deficient structures in the Richmond Region (86% of the structurally deficient structures) are owned by VDOT. There are 8 structures owned by the city of Richmond which are structurally deficient. Similarly, a number of bridges owned by Henrico County, railroad companies and the RMTA are also structurally deficient. The tables below show the distribution of structurally deficient structures by jurisdiction and by ownership in the Richmond Region.

Table 7: Structurally Deficient Bridges & Culverts by Jurisdiction

Jurisdiction	Total Bridges & Culverts	S.D. Bridges & Culverts	Percentage classified as S.D.
Town of Ashland	6	0	0.00%
Charles City County	29	2	6.90%
Chesterfield County	350	18	5.10%
Goochland County	128	8	6.30%

Functionally Obsolete Bridges & Culverts

A functionally obsolete bridge or culvert was built to standards that are not used today. These bridges (or culverts) are not automatically rated as structurally deficient, nor are they inherently unsafe. Functionally obsolete bridges do not have adequate lane widths, shoulder widths, or vertical clearances to serve current traffic demand, or those that may be occasionally flooded.

As of January 15, 2015, 185 of the 1,412 (13%) structures in the Richmond Region are classified as functionally obsolete. Almost one third of all City of Richmond structures are classified as functionally obsolete. Similarly, 55 % of structures owned by the RMTA and 12% of structures owned by VDOT are designated functionally obsolete.

Table 10: Functionally Obsolete Bridges & Culverts by Jurisdiction

Jurisdiction	Total Bridges & Culverts	F.O. Bridges & Culverts	Percentage classified as F.O.
Town of Ashland	6	2	33.3%
Charles City County	29	2	6.9%
Chesterfield County	350	37	10.6%

Deficient Structures

According to the Federal Highway Administration (FHWA) a structure is deemed "deficient" if the structure is rated either 'structurally deficient' or 'functionally obsolete'. If a structure is both structurally deficient and functionally obsolete it is designated simply as structurally deficient.

The Richmond Region has 110 structurally deficient structures and 185 functionally obsolete structures making a total of 295 deficient structures. This is almost 21% of all structures in the Richmond Region (1,412 structures in total). The breakdown of deficient structures by jurisdiction and by ownership is provided in Tables 13 and 14 below.

Table 13: Deficient Bridges & Culverts by Jurisdiction

Jurisdiction	Total Bridges & Culverts	Deficient Bridges & Culverts	Percentage classified as Deficient
Town of Ashland	6	2	33.3%
Charles City County	29	4	13.8%
Chesterfield County	350	55	15.7%
Goochland County	128	24	18.8%
Hanover County	204	50	24.5%
Henrico County	360	43	11.9%
New Kent County	97	17	17.5%
Powhatan County	47	14	29.8%
City of Richmond	191	86	45.0%
Richmond Region	**1,412**	**295**	**20.9%**

Table 14: Deficient Bridges & Culverts by Ownership

Ownership	Total Bridges & Culverts	Deficient Bridges & Culverts	Percentage classified as Deficient
Town of Ashland	1	0	0.0%
City of Richmond	79	23	29.1%
Chesterfield County	1	0	0.0%
Henrico County	65	10	15.4%
RMTA	33	18	54.5%
Transurban	34	3	8.8%
Railroad (CSX & NS)	4	4	100.0%
VDOT	1,195	237	19.8%
Total	**1,412**	**295**	**20.9%**

Weight Posted Structures

A weight-posted structure is one that has a rated load carrying capacity less than the Virginia designated legal loads.

A total of 50 bridges and culverts in the Richmond Region are weight-posted structures. The table below shows the distribution of weight posted bridge by Jurisdiction. Hanover County has the most weight posted structure in the region followed by Chesterfield County and the City of Richmond.

Table 15: Weight Posted Bridges & Culverts

Jurisdiction	Weight-Posted Bridges & Culverts
Ashland	0
Charles City County	3
Chesterfield County	9
Goochland County	8
Hanover County	13
Henrico County	1

Sufficiency Rating

Sufficiency ratings were developed by the Federal Highway Administration to serve as a prioritization tool to allocate funds. The rating varies from 0 percent (poor) to 100 percent (very good). The formula considers structural adequacy, whether the structure is functionally obsolete and level of service provided to the public. The fact that a structure has low sufficiency rating does not imply that it is necessarily unsafe.

As of January 15, 2015, the median sufficiency rating of the structures in the Richmond Region is 85. Out of 1,412 structures in the Richmond Region 80 structures (5.7%) had the sufficiency rating below 50, 454 structures (33.2%) had rating in the range 50-80 and 872 (61.8%) structures had rating in the range 80.1 -100. Sufficiency rating for a few structures were not available.

The table below illustrates the bridge/culvert sufficiency rating in the Richmond Region by jurisdictions.

Table 17: Sufficiency Rating In the Richmond Region

Jurisdiction	Total # of Bridges & Culverts	Sufficiency Rating			
		0-49.9	50-80	80.1-100	NA

City of Richmond	191	19	86	86	
Richmond Region	**1,412**	80	454	872	6

Health Index

VDOT uses another measure, the Health Index, to measure the physical condition of the structures and provide a consistent internal ranking system for bridge maintenance. A Health Index of 100% indicates that all of the elements of the structure are in the best possible condition, while a Health Index of 0% indicates that all the elements of the structure are in the worst possible condition. Only VDOT and Transurban owned and maintained roads have a Health Index.

Of the 1,412 structures in the Richmond Region only 1,242 bridges have been given a health index. Seven VDOT maintained structures are missing the Health Index. The median health index is 91.94. There are 65 structures with a health index of less than 60. Map 7 shows the location of structures with a Health Index less than 60 in the Richmond Region. A complete list of these structures follows Map 7.

Federal Bridge Funding

Deficient Structures with Sufficiency Rating less than 50

A deficient structure is one which is either structurally deficient or functionally obsolete. Deficient bridges with sufficiency ratings of less than 50 qualify for federal bridge replacement funds.

In the Richmond Region, 77 structures have been identified as deficient structure with sufficiency rating less than 50. The City of Richmond has 19 such structures followed by Hanover and Chesterfield County with each having 16 such structures. Viewed by ownership, all 4 structures owned by the railroad companies (Norfolk Southern & CSX) fall under this category. Similarly, 63 of VDOT owned structures (5.3% of all structures owned by VDOT), 6 structures owned by the City of Richmond and 3 structures owned by Henrico County, fall under this category.

Deficient bridges with sufficiency ratings greater than 50 and less than or equal to 80

Deficient bridges with sufficiency ratings greater than 50 and less than or equal to 80 qualify for federal bridge rehabilitation funds. The breakdown of these structures are presented in Tables 17 and 18 below.

Table 22: Deficient Structures with Sufficiency Rating 50-80 by Jurisdictions

Jurisdiction	Total Bridges	Deficient Structures with Sufficiency Rating 50-80	Percentage classified as Deficient Structures with Sufficiency Rating 50-80
Town of Ashland	6	2	33.3%
Charles City County	29	3	10.3%
Chesterfield County	350	29	8.3%
Goochland County	128	17	13.3%
Hanover County	204	29	14.2%
Henrico County	360	27	7.5%
New Kent County	97	13	13.4%
Powhatan County	47	6	12.8%
City of Richmond	191	45	23.6%
Richmond Region	**1,412**	**171**	**12.1%**

Table 23: Deficient Structures with Sufficiency Rating 50 -80 by Ownership

Ownership	Total Bridges	Deficient Structures with Sufficiency Rating 50-80	Percentage classified as Deficient Structures with Sufficiency Rating 50-80
Town of Ashland	1	0	0.0%
City of Richmond	79	15	19.0%
Chesterfield County	1	0	0.0%
Henrico County	65	6	9.2%
RMTA	33	7	21.2%
Transurban	34	0	0.0%
Railroad	4	0	0.0%
VDOT	1,195	143	12.0%
Total	**1,412**	**171**	**12.1%**

Map 9 shows the location of structures eligible for federal bridge rehabilitation funds (deficient structures with sufficiency rating 50-80) in the Richmond Region. A complete list of these structures follows Map 9.

Appendix B.

VDOT Bridge General Condition Rating Code Key

Code	Description
N	NOT APPLICABLE
9	EXCELLENT CONDITION
8	VERY GOOD CONDITION No problems noted.
7	GOOD CONDITION Some minor problems.
6	SATISFACTORY CONDITION Structural elements show some minor deterioration.
5	FAIR CONDITION All primary structural elements are sound but may have some minor section loss (due to corrosion), cracking, spalling (deterioration of concrete surface) or scour (erosion of soil)
4	POOR CONDITION Advanced section loss, deterioration, spalling or scour.
3	SERIOUS CONDITION Loss of section, deterioration, spalling or scour have seriously affected primary structural components. Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present.
2	CRITICAL CONDITION Advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken.
1	"IMMINENT" FAILURE CONDITION Major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic but corrective action may put back in light service.
0	FAILED CONDITION Out of service -beyond corrective action.
