ABSTRACT
The Richmond Regional Transportation Planning Organization (RRTPO) is in the process of updating the regional Long-Range Transportation Plan (LRTP) to the horizon year 2050. This LRTP has been branded as Pathways to the Future: Transportation 2050. As part of this process and in keeping with federal regulations, RRTPO staff have been tracking the condition and funding of the region's bridges, culverts, and tunnels since 2014.

This report serves as an update and uses snapshot data maintained by the Virginia Department of Transportation as of June 12, 2024. The report also documents the Commonwealth's State of Good Repair (SGR) Prioritization Process Methodology for the replacement and rehabilitation of structurally deficient bridges in the region.

Richmond Regional Transportation Planning Organization
POWERED BY PlanRVA

ACKNOWLEDGEMENT

Pathways to the Future: Transportation 2050 was prepared in cooperation with the U.S. Department of Transportation, Federal Highway Administration, Virginia Department of Transportation, and the Virginia Department of Rail and Public Transportation. This report also represents the collective work of state, regional, local and special interest representatives of the RRTPO 2050 Long-Range Transportation Plan Advisory Workgroup.

DISCLAIMER

The contents of this report do not necessarily reflect the official views or policies of the Federal Highway Administration (FHWA), the Federal Transit Administration (FTA), the Virginia Department of Rail and Public Transportation (VDRPT) or the Virginia Department of Transportation (VDOT). This report does not constitute a standard, specification, or regulation. PlanRVA and RRTPO are responsible for the facts and accuracy of the data presented herein.

NOTICE

This document is disseminated under the sponsorship of the U.S. Department of Transportation in the interest of information exchange. The United States Government, the Commonwealth of Virginia, PlanRVA and the RRTPO member organizations assume no liability for the contents or use thereof.

NONDISCRIMINATION

PlanRVA and the RRTPO fully comply with Title VI of the Civil Rights Act of 1964 and related statutes and regulations in all programs and activities. PlanRVA, on behalf of the RRTPO, will strive to provide reasonable accommodation and services for people who require special assistance to participate in this public involvement opportunity. For more information on meeting accessibility, or to obtain a Title VI Complaint Form, see PlanRVA.org/TitleVI or call the Title VI Coordinator at 804- 323-2033.

NO DISCRIMINACIÓN

Aviso de Título VI abreviado al público: RRTPO cumple plenamente con Título VI de la ley de Derechos Civiles de 1964 y con estatutos relacionados en todas programas y actividades. El RRTPO se esforzará por proporcionar alojamiento y servicios razonables para las personas que requieren asistencia especial para participar en esta oportunidad de participación pública. Para más información sobre accesibilidad de la reunión o para obtener los documentos de reclamación de Título VI, por favor visita https://planrva.org/TitleVI o llama el Coordinador del Título VI en 804-323-2033.

NOTE PlanRVA is the brand of the legal entity known as Richmond Regional Planning District Commission. RRTPO is the brand of the federally designated Richmond Area Metropolitan Planning Organization.

1. Executive Summary

Bridges, culverts, and tunnels (called structures collectively) are critical building blocks of an efficient transportation system. Bridge location, design, and structural health are a key element in planning and maintaining an effective transportation network. Bridge dependability is especially important in the Richmond region due to the relatively high number of bridges in a region with numerous interstate freeways and state highways, the crossroads of three major railroad systems, and multiple major rivers and the creeks and streams that feed them. Concerned about the number of aging bridges in the region and the apparent lack of funding for maintaining or replacing them, RRTPO began tracking the condition and funding of the region's bridges since 2014.

The 2024 Richmond Regional Structural Inventory Assessment Report provides inventory of the structures in the Richmond region (i.e., Planning District 15) and includes VDOT system and non-VDOT system roads (i.e., Richmond and Ashland urban system, Henrico secondary system, RMTA, and private bridges and culverts) and identify those in poor condition (i.e., structurally deficient, weight posted, etc.). The report utilizes data provided and maintained by the Office of Intermodal Planning and Investment as of June 1, 2024.

The report also documents the Commonwealth's State of Good Repair (SGR) Prioritization Process Methodology for replacement and rehabilitation of structurally deficient state and locally owned bridges as adopted by the Commonwealth Transportation Board (CTB) and includes a latest prioritized list for all VDOT-owned and locality-owned bridges in the Richmond Region. Between the last report and this update, VDOT has expanded what they will consider "structurally deficient". Rather than only including structures within the "Poor" category, the definition has been expanded to include structures on the edge of becoming poor, or "cusp" structures.

In this report, "Structurally Deficient" will include structures that are considered in the "poor" category as well as structures in the "fair" condition category with a general condition rating of '5'. Structures in the "fair" condition with a GCR of 5 are considered "cusp" structures, meaning they are on the cusp of falling into the "poor" condition. This change in structure categorization will allow more projects to become eligible for State of Good Repair funding sooner, with the hope that overall project repair costs will be lower due to repairs being started sooner. The terms "structurally deficient," account for structures with a General Condition Rating (GCR) of four or less. "Cusp" will be used to indicate structures with a GCR of 5, and "good" will be used to indicate a GCR of 6 or higher.

In 2020, 1,428 structures were listed in the database which included 818 bridges and 610 culverts. In 2024, the total number of structures listed in the data is 1509 including 870 bridges and 639 culverts. This represents a 5.7% increase in all structures, with a 6.4% increase in bridges and a 4.8% increase in culverts. The difference in inventory can be attributed to newly built structures as well as some structures getting closed and being replaced. Bridges and culverts in the Richmond Region are owned and maintained by VDOT, various jurisdictions and other public and private agencies. VDOT owns and maintains 85% of all bridges and culverts in the RRTPO. The City of Richmond and Henrico County owns and maintains 13% of all bridges and culverts in the RRTPO. Local Tolling agency, Richmond Metropolitan Transportation Authority (RMTA), owns and maintains 3% of all structures in the TPO. The remaining 0.1% of structures are owned and maintained by the Department of Motor Vehicles, Richmond International Airport, and the Town of Ashland.

The median year a structure (bridge or culvert) was constructed (or undergo major reconstruction) in the Richmond Region is 1976, making the median age of the structures in the region as 48 years as of January 2024.

Most structures in the RRTPO area were constructed (or underwent a major reconstruction) between 1970 and 1979. Out of 1,509 structures in the Richmond Region, 283 structures (19%) were built before 1960. Of those bridges, 57% have gone through reconstruction work. The bulk of the bridges in the region were built from 1960 to 2023 (81%). From 1960 through 2023 the PlanRVA area gained 1,175 bridges and culverts (81%). Of those structures, 190 (16%) have been reconstructed.

Structures are considered structurally deficient or in poor condition if they have been restricted to light vehicles, closed to traffic or require rehabilitation. Structurally deficient means - there are elements of the bridge that need to be monitored and/or repaired. The fact that a bridge is "structurally deficient" does not imply that it is likely to collapse or that it is unsafe. In 2024 VDOT made changes to how they categorize "structurally deficient" bridges. Prior to the 2024 update bridges were considered "Structurally Deficient" if their General Condition Rating were given a score of 4 or lower. The criteria for structural deficiency were expanded to include structures with a GCR of 5. Structures with a GCR of 5 are on the cusp of becoming "poor" structures and may now be included in the "Structurally Deficient" category. The aim of this change is to make a greater number of bridges eligible for State of Good Repair funding sooner, thereby reducing the total repair costs as structures can begin repairs while they are smaller projects. In 2020, 65 structures were classified as structurally deficient. Prior to VDOT's update the number of

structurally deficient structures in the RRTPO had been reduced to 60 structures. With VDOT's expansion of the structural deficiency category the number of bridges and culverts considered "structurally deficient" rose to 556. It is important to reiterate that this does not mean there are 556 unsafe or near collapse structures in the RRTPO area, they are simply structures needing some repair or on the verge of needing repair.

The list of structures in the region which are categorized as in "poor condition" will be fed into the 2050 LRTP Update plan as bridge replacement/rehabilitation needs/projects within the State of Good Repair (SGR) funding pot.

The following summarizes the findings of the 2024 update of the Richmond Regional Bridge & Culvert Inventory & Structural Report:

- Total number Structures in the Richmond Region: 1,509*
- Total number of Bridges: 870
- Total number of Culverts: 639
- Total number of Structurally Deficient Structures: 556
    - Poor Structures: 66
    - Cusp Structures: 490
- Percentage of deck area conditions
    - Good Condition: 6.50%
    - Fair Conditions: 45.75%
    - Cusp Conditions: 43.61%
    - Poor Condition: 4.15%
- Median Age of Structures: 46 years

*The total number of Structures in the Richmond Region includes all structures in Chesterfield County, even those outside of the RRTPO boundary. This was done to ensure that the condition of the structures in the entirety of all counties that are part of the RRTPO are included.

2. Definitions

2.1 Bridge and Culvert

Bridges and culverts are collectively called "structures". The National Bridge Inspection Standards (NBIS) published in the Code of Federal Regulations (23 CFR 650.3) give the following definition of a bridge:

"*A structure including supports erected over a depression or an obstruction, such as water, highway, or railway, and having a track or passageway for carrying traffic or other moving loads, and having an opening measured along the center of the roadway of more than 20 feet (6.1 meters) between under copings of abutments or spring lines of arches, or extreme ends of openings for multiple boxes; it may also include multiple pipes, where the clear distance between openings is less than half of the smaller contiguous opening*."

Similarly, according to Report No. FHWA-PD-96-001 (Recording and Coding Guide for the Structure and Inventory of the Nation's Bridges) a culvert is defined as:

"*A structure designed hydraulically to take advantage of submergence to increase hydraulic capacity. Culverts, as distinguished from bridges, are usually covered with embankment and are composed of structural material around the entire perimeter, although some are supported on spread footings with the streambed serving as the bottom of the culvert. Culverts may qualify to be considered "bridge" length*.

2.2 National Bridge Inventory (NBI)

The National Bridge Inventory (NBI) is a database, compiled by the Federal Highway Administration (FHWA), with information on all structures in the United States that have roads passing above or below. The data is used to analyze bridges and judge their conditions. The bridge inventory is developed with the purpose of having a unified database for bridges, including identification information, bridge types and specifications (including geometric data) and operational conditions. Any bridge

or culvert satisfying the definition of structure in NBI as stated above and more than 20 feet (6.1 meters) long used for vehicular traffic is included in NBI. Those structures which are included in the NBI are called “NBI structures”.

Similarly, a structure is referred to as a “non-NBI structure” if it is a bridge with a clear span opening (as defined above) of less than 20 feet or a culvert with an opening of greater than 36 square feet but not meeting the definition of an “NBI structure” given above.

2.3 National Highway System (NHS)

The National Highway System consists of roadways important to the nation’s economy, defense, and mobility. The National Highway System (NHS) includes the following subsystems of roadways: Interstate, Other Principal Arterials, Strategic Highway Network (STRAHNET), Major Strategic Highway Network Connectors and Intermodal Connectors. The NHS was developed by the Department of Transportation (DOT) in cooperation with the states, local officials, and metropolitan planning organizations (MPOs).

2.4 Data Sources for the Report

Data used to create the updated Structural Inventory & Structural Assessment Report comes from two state sources. The Office of Intermodal Planning and Assessment (OIPI) and the Virginia Department of Transportation (VDOT). These two organizations routinely gather and update structural inventory data for bridges and culverts in the RRTPO and beyond. The final Bridge and Culvert inventory data was provided to PlanRVA from OIPI on June 17. VDOT is responsible for the inventory and inspections of all structures across the state including bridges and culverts owned by VDOT and other jurisdictions, public agencies, and private entities (e.g. railroads, private toll roads, etc.). VDOT inspects and documents all bridges regardless of their length and all culverts having an opening greater than 36 square feet. The data provided from OIPI is the primary source for structures found in the NBI and NHS.

Excel files containing bridge and culvert data from OIPI were downloaded and filtered to contain only the bridge and culvert data within the VDOT Richmond District. The data was then filtered further to select and identify the structures located in each of the nine jurisdictions (Town of Ashland, Counties of Charles City, Chesterfield, Hanover, Henrico, Goochland, New Kent and Powhatan, and City of Richmond) of the Richmond Region. All tables in the report were created from the provided OIPI data or taken directly from VDOT’s “State of the Structures and Bridges Fiscal Year 2023” report.

2.5 Regional Bridge and Culvert Summary

The database has 1,509 structures listed in the Richmond Region. It includes 870 bridges and 639 culverts. The database includes 1,164 NBI structures and 345 non-NBI structures. All analysis in this document is based on all the structures listed in the database. Exhibit 1 shows the breakdown by the total number of bridges and culverts and by NBI or Non- NBI structures.

Exhibit 1: 2024 Culverts & Bridges in the RRTPO

Type	NBI	Non-NBI	Total
Bridge	803	67	870
Culvert	361	278	639
Region Total	**1,164**	**345**	**1,509**

2.6 Structures by Jurisdiction

Exhibit 2 shows the number of structures by type and jurisdiction. Chesterfield and Henrico counties have the two largest number of structures, with over 780 between them. The City of Richmond and Hanover County have the second greatest number of bridges and culverts with a total of 409 structures. New Kent boasts a total of 96 structures and Charles City and Powhatan County and the Town of Ashland each have fewer than 50 structures.

Exhibit 2: Total Structures by Type & Jurisdiction

Jurisdiction	Bridge	Culvert	Total
Ashland	2	3	5
Charles City	24	16	40
Chesterfield	199	181	380
Goochland	67	61	128
Hanover	144	65	209
Henrico	188	216	404
New Kent	46	50	96
Powhatan	31	16	47
Richmond	169	31	200
Region Total	**870**	**639**	**1,509**

2.7 Structures by NBI and NHS

Exhibits 3 and Exhibit 4 respectively display the total Structures in the National Bridge Inventory (NBI) and National Highway System (NHS) by Jurisdiction. 77% of structures in Richmond region are listed in the NBI and 46% of structures are in NHS. Exhibit 5 indicates that the number of structures both in NBI and NHS is 507, 35% of the total.

Exhibit 3: Total Structures in NBI & Non-NBI by Jurisdiction

Jurisdiction	NBI	Non-NBI	Total
Ashland	3	2	5
Charles City	22	18	40
Chesterfield	303	77	380
Goochland	87	41	128
Hanover	163	46	209
Henrico	305	99	404
New Kent	58	38	96
Powhatan	35	12	47
Richmond	188	12	200
Region Total	**1,164**	**345**	**1,509**

Exhibit 4: Total Structures in NHS & Non-NHS by Jurisdiction

Jurisdiction	NHS	Non-NHS	Total
Ashland	1	4	**5**
Charles City	0	40	**40**
Chesterfield	188	192	**380**
Goochland	38	90	**128**
Hanover	54	155	**209**
Henrico	236	168	**404**
New Kent	62	34	**96**
Powhatan	8	39	**47**
Richmond	111	89	**200**
Region Total	**698**	**811**	**1,509**

Exhibit 5: Total Structure in NBI & NHS by Jurisdiction

Jurisdiction	Number of Structures in NBI and NHS	Number of Structures in Total	Percentage
Ashland	0	5	0%
Charles City	0	40	0%
Chesterfield	158	380	42%
Goochland	24	128	19%
Hanover	41	209	20%
Henrico	164	404	41%
New Kent	33	96	34%
Powhatan	5	47	11%
Richmond	99	200	50%
Region Total	**524**	**1,509**	**35%**

2.8 Structures by Highway System

For funding purposes, Virginia's Highway System is divided into five categories- Interstate, Primary, Secondary, Urban, and Other. Most of the structures in the Richmond region are in Primary and Secondary highway systems consisting of 33% and 34%, respectively. Exhibit 6 shows the total number of structures in each category.

Exhibit 6: Total Structures by Highway System

Highway System	Number of Bridges	Number of Culverts	Number of Structures	Percentage
Interstate	178	163	341	23%
Primary	316	180	496	33%
Secondary	282	229	511	34%
Urban	85	67	152	10%
Other	9	0	9	1%
Grand Total	**870**	**639**	**1,509**	**-**

2.9 Structures by Ownership

VDOT owns and maintains around 84.71% of all bridges and culverts in the region. Of the 1284 structures owned by VDOT, 1 is maintained by Chesterfield County, 1 is maintained by CSX, and 33 are maintained by Globalvia. Ownership and Maintenance are used interchangeably in the structures data reported by VDOT. The City of Richmond and Henrico County have the second greatest share of structures with 12.3%. The local tolling agency, Richmond Metropolitan Transportation Authority (RMTA), owns and maintains the fourth greatest number of structures with 36 bridges and 2 culverts (2.63% of all structures). The remaining structures are owned by the Town of Ashland, the Department of Motor Vehicles, and Richmond International Airport, they account for 0.35% of RRTPO structures. Exhibit 7 shows total structures by type by ownership.

Exhibit 7: Total Structures by Type and Ownership

Structure Ownership/Maintenance Responsibility	Bridge	Culvert	Total Structures	Percentage of structures owned
Town of Ashland	0	1	1	*0.07%*
City of Richmond	60	25	85	*5.67%*
Chesterfield County	0	1	1	*0.06%*
Henrico County	24	72	96	*6.64%*
Richmond International (RIC)	2	0	2	*0.14%*
Richmond Metropolitan Transportation Authority (RMTA)	36	2	38	*2.63%*
Department of Motor Vehicles (DMV)	2	0	2	*0.14%*
VDOT*	746	538	1284	*84.71%*
Grand Total	**870**	**639**	**1509**	**-**

Exhibit 8: VDOT Owned Structures

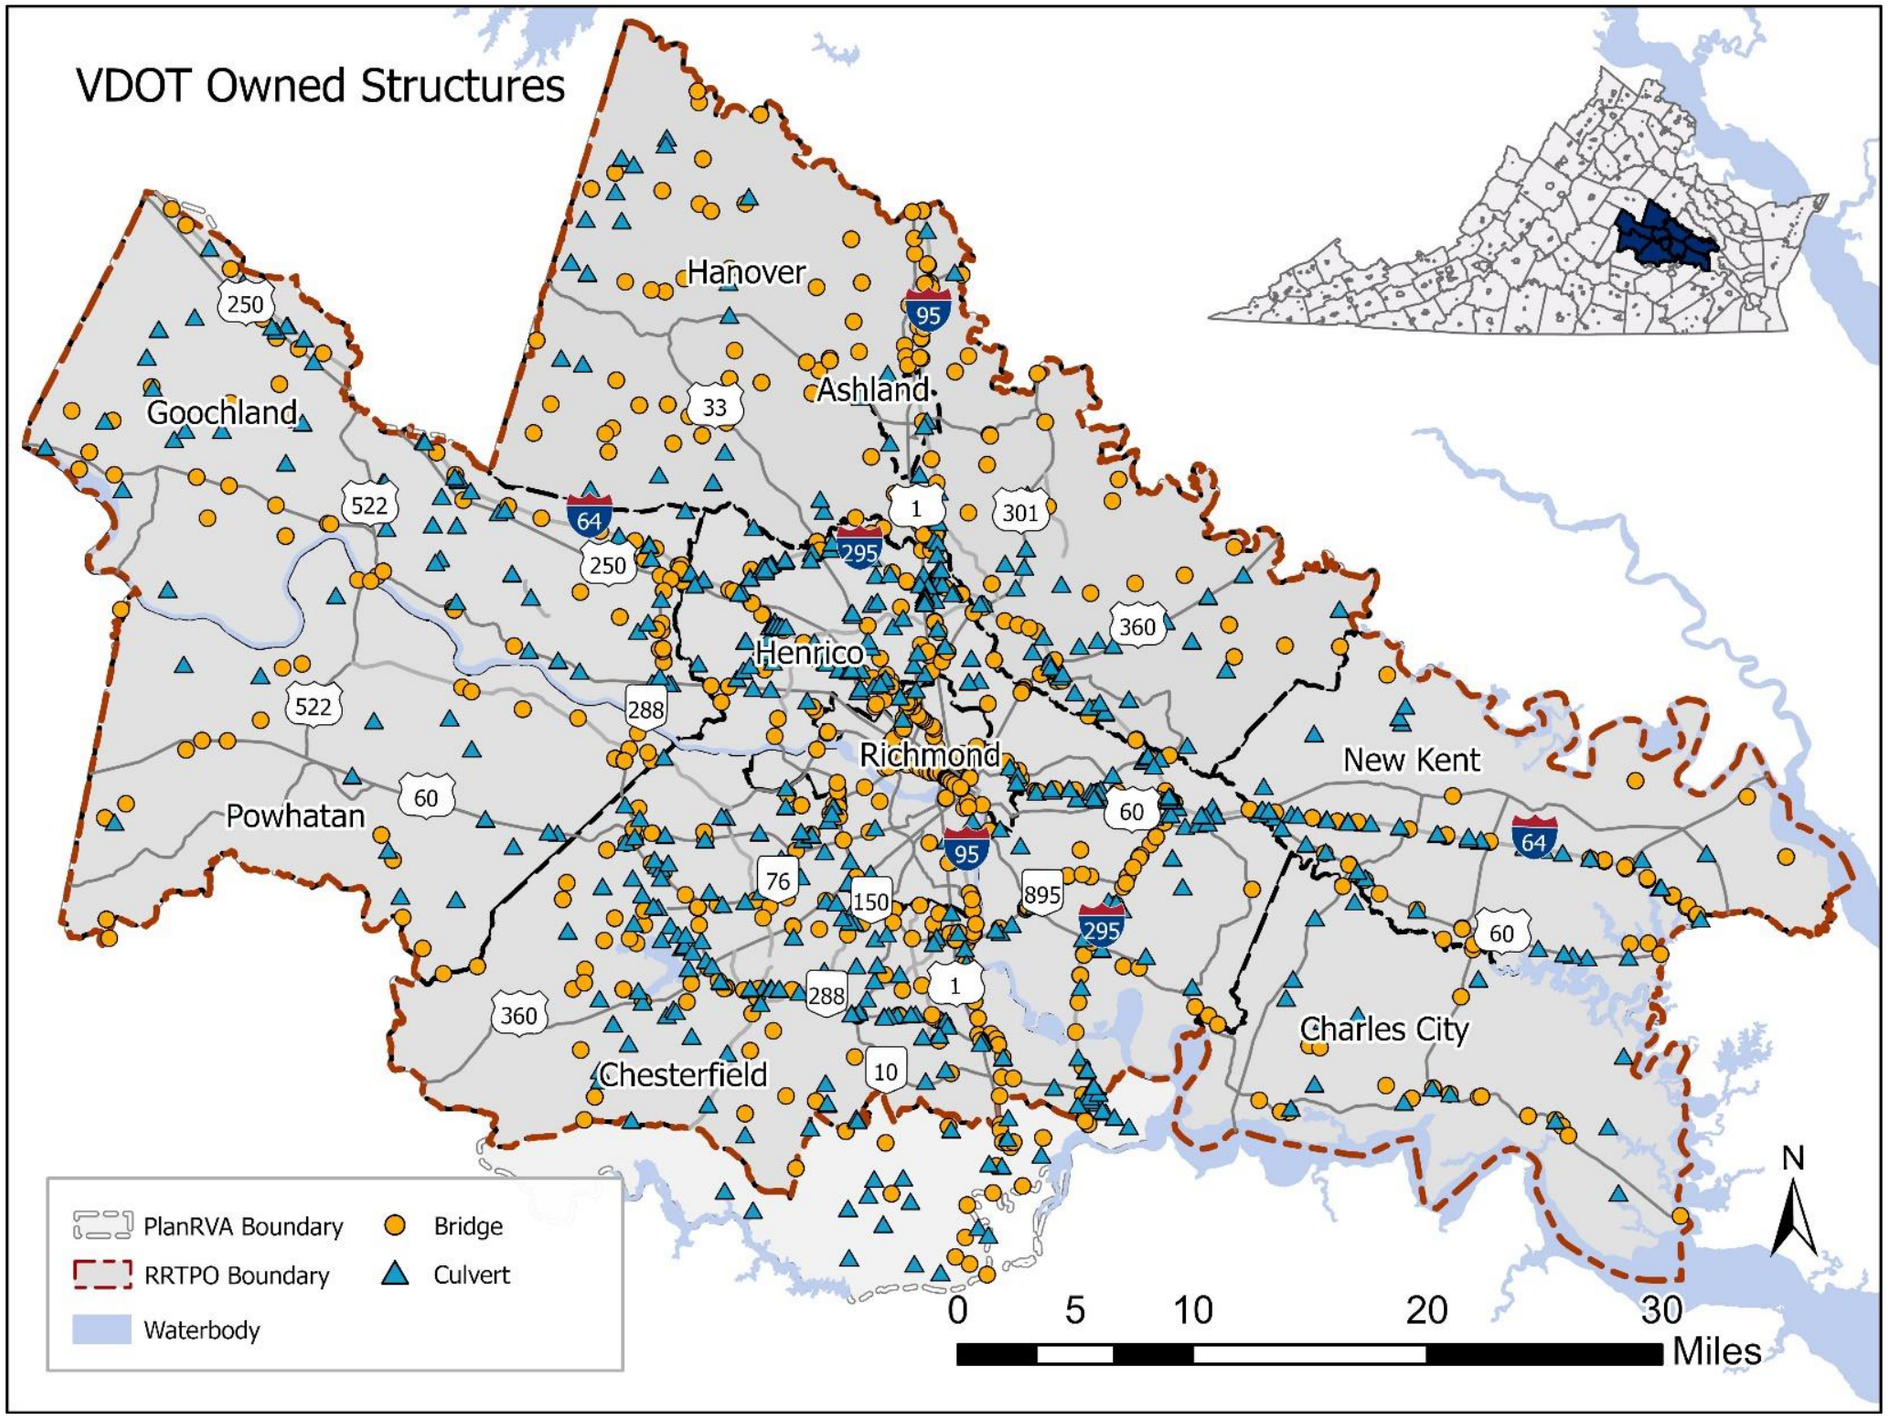

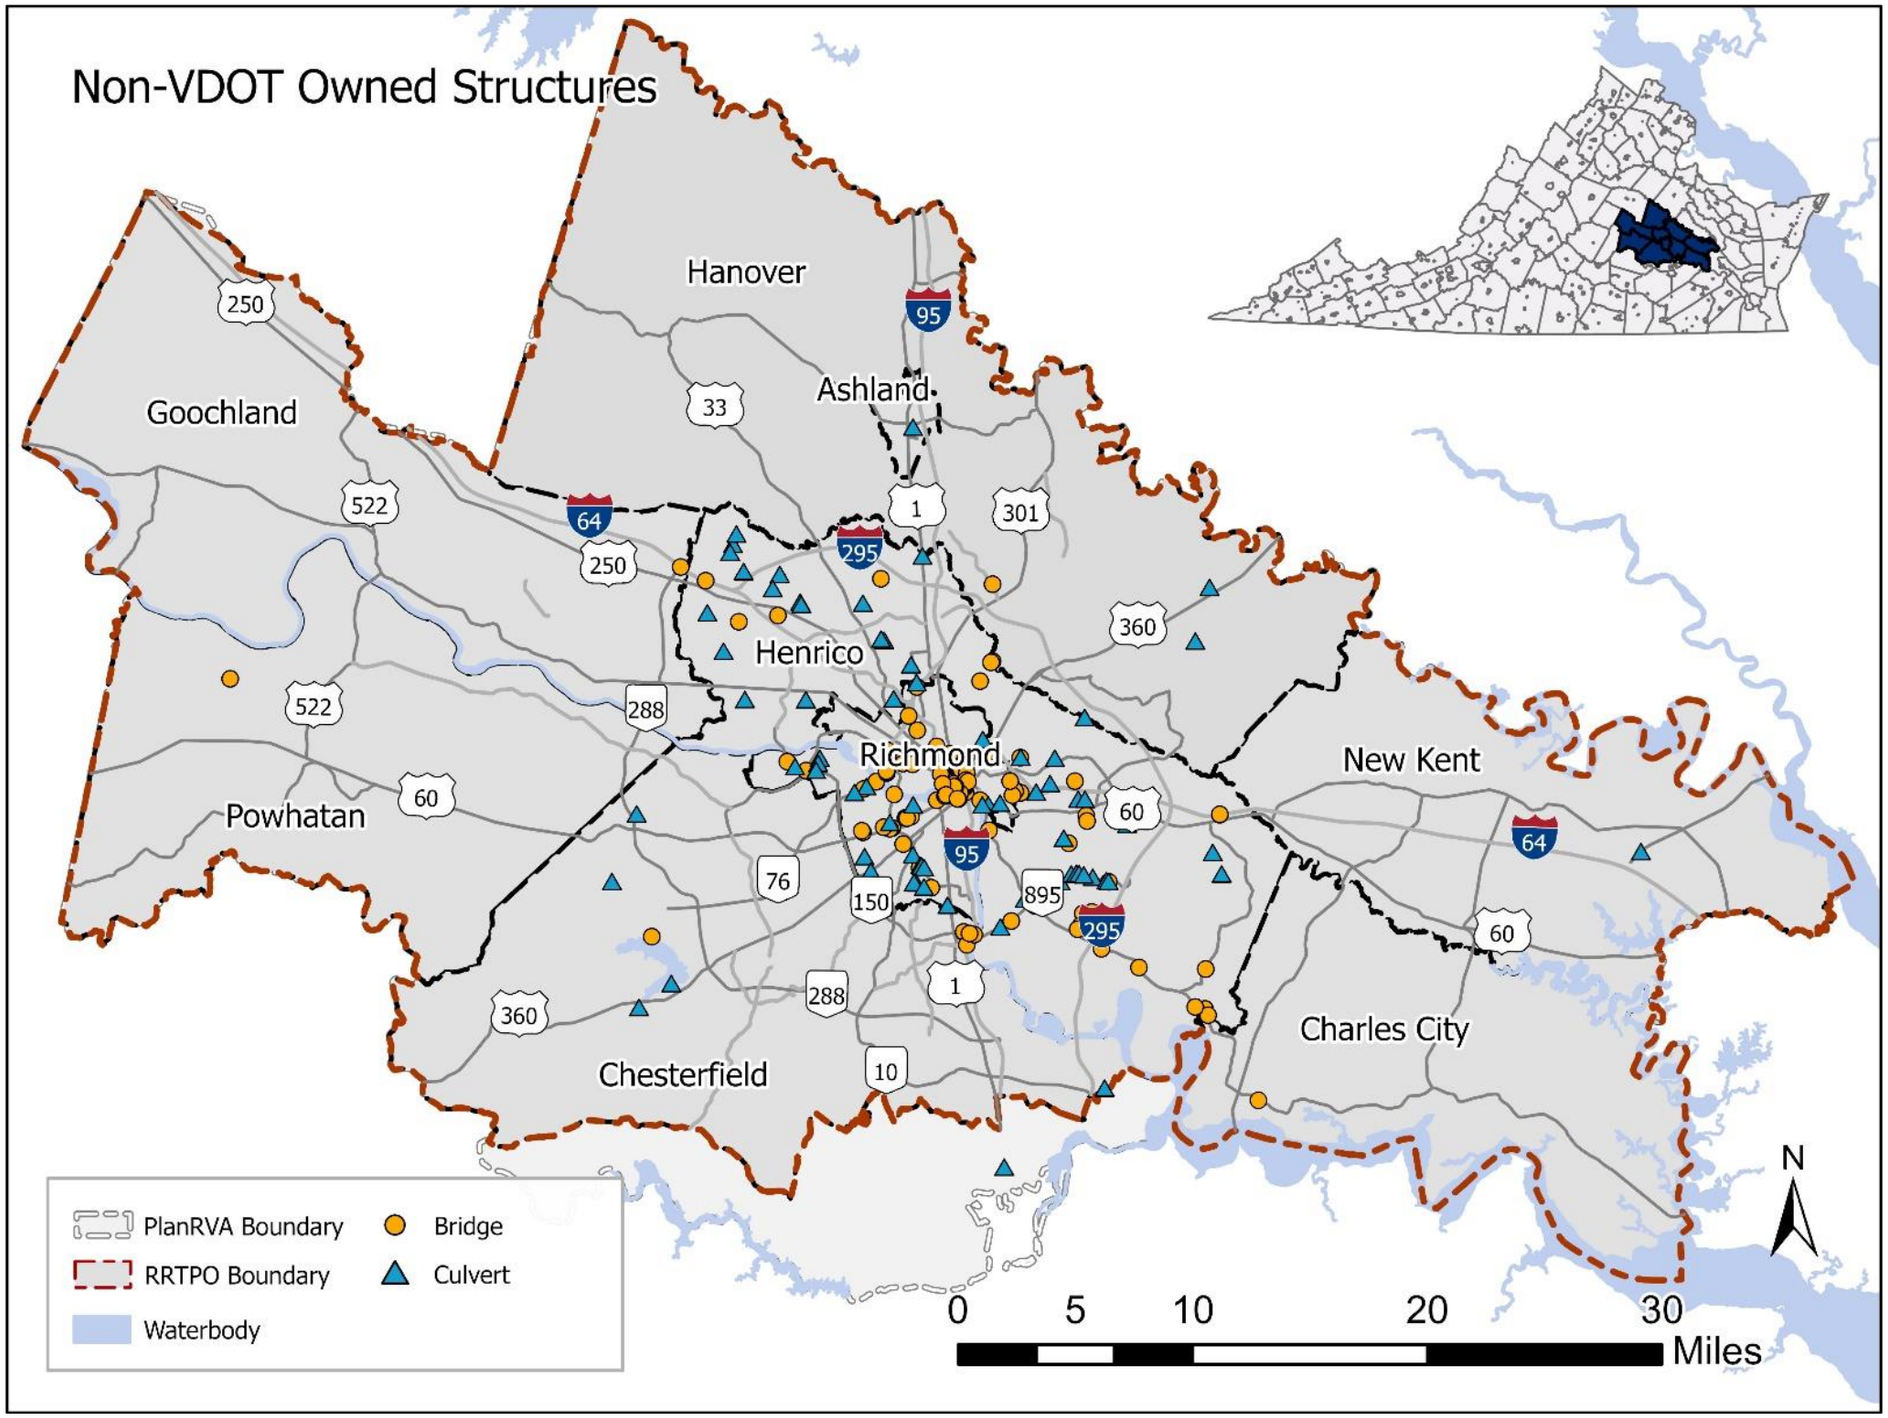

Exhibit 9: Non-VDOT Owned Structures

2.10 Structures by Age

The median year a structure (bridge or culvert) was constructed (or undergo major reconstruction) in the Richmond Region is 1977, making the median age of the structures in the region as 46 years as of January 2024. Out of 1,509 structures in the Richmond Region, 283 structures (19%) were built before 1960. Of those bridges, 57% have gone through reconstruction work. The bulk of the bridges in the region were built from 1960 to 2023 (81%). From 1960 through 2023 the PlanRVA area gained 1,226 bridges and culverts (81%). Of those structures, 205 (17%) have been reconstructed.

Exhibit 10 shows the breakdown of bridges and culverts built in the Richmond Region by decade built.

Exhibit 10: Bridges & Culverts by Decade Built/Reconstructed

Jurisdiction	1900-1909	1910-1919	1920-1929	1930-1939	1940-1949	1950-1959	1960-1969	1970-1979	1980-1989	1990-1999	2000-2009	2010-2019	2020-2023	Total

3. Bridge Conditions

3.1 Inspection and Ratings

The Virginia Department of Transportation (VDOT) is responsible for the inventory and inspection of all bridges and culverts across Virginia, including bridges and culverts owned by VDOT, other jurisdictions, public agencies, and private entities (e.g. railroads, private toll roads etc.). The bridges and culverts are inspected in accordance with the National Bridge Inspection Standards (NBIS).

Condition ratings are used to describe an existing bridge compared to its condition if it were new. The ratings are based on the materials, physical condition of the deck (riding surface), the superstructure (supports immediately beneath the driving surface) and the substructures (foundation and supporting posts and piers). Culverts have one element to inspect (the whole culvert,) unlike the bridges which have three (deck, superstructure and substructure). General condition ratings range from 0 (failed condition) to 9 (excellent). Bridges and culverts with a condition rating of 0-4 are considered “poor,” a condition rating of 5 or 6 is considered “fair,” and a score of 7 or greater is considered in “good” condition. A structure’s condition is determined by the lowest rating of either the deck, superstructure, substructure, or culvert. Since July 2024, structures with a rating of ‘5’ are also considered “cusp” structures and can be included towards the total of “Structurally Deficient” structures for State of Good Repair eligibility. The VDOT Bridge Condition Code key is attached in Appendix B for reference.

Exhibit 11 shows Structures in General Condition Scores by Jurisdiction. Most of the structures' scores fall within the 5 to 7 range. Similarly, Exhibit 12 shows the structures in poor, fair, cusp, and good conditions.

Exhibit 11: Structure General Condition Scores by Jurisdiction

Jurisdiction	Score								Total
	0-2	3	4	5	6	7	8	9	
Ashland	0	0	0	2	2	1	0	0	5
Charles City	0	0	3	7	20	10	0	0	40
Chesterfield	0	1	12	83	196	78	10	0	380
Goochland	0	0	2	35	75	16	0	0	128

3.2 Structurally Deficient Bridges and Culverts

Bridges are considered structurally deficient if they have been restricted to light vehicles, closed to traffic or require rehabilitation. Structurally deficient means there are elements of the bridge that need to be monitored and/or repaired. A bridge or culvert can also be added to the “Structural Deficient” category if it has a minimum General Condition Rating (GCR) of 5.

The condition of different parts of a bridge is rated on a scale of 0 to 9 (with 9 being “excellent” and zero being “failed”). A structurally deficient bridge is one for which the deck (riding surface), the superstructure (supports immediately beneath the driving surface) or the substructure (foundation and supporting posts and piers) are rated in condition 4 or less.

The fact that a bridge is "structurally deficient" does not imply that it is likely to collapse or that it is unsafe. To remain open to traffic, structurally deficient bridges are often posted with reduced weight limits that restrict the gross weight of vehicles using bridges. If unsafe conditions are identified during a physical inspection, the structure must be closed.

In 2024 VDOT made changes to how they categorize “structurally deficient” bridges. Prior to the 2024 update bridges were considered “Structurally Deficient” if their General Condition Rating was given a score of 4 or lower. The criteria for structural deficiency were expanded to include structures with a GCR of 5. Structures with a GCR of 5 are on the cusp of becoming “poor” structures and may now be included in the “Structurally Deficient” category. The aim of this change is to make a greater number of bridges eligible for State of Good Repair funding sooner, thereby reducing the total repair costs as structures can begin repairs while they are smaller projects.

In 2020, the RRTPO had 65 structures classified as structurally deficient. Prior to VDOT’s update the number of structurally deficient structures in the RRTPO had been reduced to 60 structures which would be 4% of all structures. With VDOT’s update the number of bridges and culverts considered “structurally deficient” rose to 556, making 37% of structures in the TPO considered “Structurally Deficient.”

Exhibit 13 shows a list of Structurally Deficient Bridges & Culverts by Jurisdiction. Henrico County has the greatest total number of “Structurally Deficient” structures followed by The City of Richmond, and Chesterfield County. New Kent County, the City of Richmond, and Hanover County have the greatest percentages of structurally deficient bridges and culverts. Chesterfield County has the lowest percentage of structurally deficient structures in the RRTPO, at 25%.

Exhibit 13, the table above, shows the distribution of “poor,” “cusp,” and “structurally deficient” structures by jurisdiction. Exhibit 14, the table below, shows the distribution of “poor”, “cusp”, and “structurally deficient” structures by ownership. In the Richmond Region 469 of 556 structurally deficient structures (84%) are owned by VDOT. There are 38 structurally deficient structures owned by the City of Richmond, 25 are owned by the Richmond Metropolitan Transportation Authority

(RMTA), and 24 are owned by Henrico County. Exhibit 16 shows a list of “Cusp” bridges and culverts in the RRTPO. Exhibit 17 shows a list of “Poor” bridges and culverts in the RRTPO.

3.3 Weight Posted Bridges

A weight-posted structure is one that has a rated load carrying capacity less than the Virginia designated legal loads. A total of 81 bridges and culverts in the Richmond Region are weight-posted structures. Exhibit 18 below shows the distribution of weight posted bridge by Jurisdiction. Hanover County has the greatest number of weight posted structures in the region followed by Goochland and Chesterfield counties.

Exhibit 18: Weight Posted Bridges & Culvert

	Open Bridges & Culverts, no restrictions	Open - Temporary Shoring Bridges & Culverts	Weight-Posted Bridges & Culverts	Closed	Total
Ashland	5	0	0	0	5
Charles City	36	0	4	0	40

4. Performance Management Measures

Assuring compliance with federal regulation while adequately accounting for the unique needs of an individual state requires more than a one sized fit all performance system. To ensure that federal performance measures are met and to be mindful of the challenges presented by Virginia and its many localities, the Commonwealth uses both state and federal performance targets.

4.1 State Performance Management Measures

While state performance measures had been focused on the replacement of poor structures, the CTB passed a resolution in December 2019 which shifted the focus to the preservation of the existing structural inventory. The shift in focus was developed with the goal of sustaining an acceptable level of service for the bride inventory throughout the next 50 years. measures that were dev According to the annual report of State of the Structures and Bridges Fiscal Year 2023 published by VDOT, there are three performance measures and targets for bridge conditions in the commonwealth. 1) structures should have an average general condition rating greater than or equal to 5.6, 2) the percentage of structures in good and fair condition for Interstates should be greater than or equal to 97%, for Primary roads it should be greater than or equal to 93%, and on Secondary/Urban roads it should be greater than or equal to 90%, and 3) there should be no weight-restricted structures on the interstate system.

- **Average General Condition Rating (GCR) ≥ 5.6**
- **Percentage of structures by count in good and fair condition**

- **Interstate ≥ 97%**
- **Primary ≥ 93%**
- **Secondary/Urban ≥ 90%**

- **No weight-restricted structures on the interstate system**

4.1.1 Poor (SD) Performance Management Measures:

If one or more of the structure components (deck, superstructure, substructure or large culvert) has a General Condition Ranking (GCR) of 4 or less, then the structure is determined to be Poor. Poor structures with deficient structural components require to be monitored and/or repaired. If a structure has been assigned the minimum GCR of 5 it is determined to be a "cusp" structure, and it can be counted towards the total count of "Structural Deficient" brides and culverts.

The report indicates that Virginia's overall goal for Poor (SD) structures is to limit their number to 4.5% of the overall inventory (95.5% in Good or Fair condition and the minimum percentage of structures in Good or Fair condition on each of the three highway systems. The current target for the state and the current state performance and the Richmond Region are listed in Exhibit 22. The current performance in Richmond region is 95.8%, only 0.3% beyond the current state target 95.5%.

Exhibit 21: Poor and Cusp Structures by Highway System in the RRTPO

Highway System	Total Structures	Poor Structures	% Poor Structures	Cusp Structures	% Cusp Structures
Interstate	341	5	1.5%	144	42.2%
Primary	496	17	3.4%	170	34.2%
Secondary	511	28	5.5%	135	26.4%
Urban	152	16	6.5%	41	26.9%
Other	9	0	0%	0	0.0%
Total	**1,509**	**66**	**4.4%**	**490**	**32.5%**

Exhibit 22: The Current Target and Performance for the Virginia State and the RRTPO

Highway System	Total Structures	Structures in Good or Fair condition (Exclusing "Cusp")	Structures in Good or Fair condition (Including "Cusp")	Current State Target	Current State Performance	Current Performance in Richmond Region (Excluding "Cusp"	Current Performance in Richmond Region (Including "Cusp"
Interstate	341	192	336	97.0%	99.3%	56.0%	98.5%
Primary	496	309	479	93.0%	97.5%	62.0%	96.9%
Secondary & Urban	663	443	619	90.0%	96.0%	67.0%	93.4%
Other	9	9	9	N/A	N/A	100.0%	100.0%
Total	**1,509**	**953**	**1,443**	**-**	**96.8%**	**63.2%**	**95.8%**
***State Performance taken from VDOT's Dashboard. The Dashboard includes "Cusp" structures with a GCR of 5 to be "Fair"**							

4.2 Federal Performance Management Measures

The "Moving Ahead for Progress in the 21st Century" (MAP21) requires states to develop Transportation Asset Management Plans (TAMPs). TAMPs track the performance of various assets, including NBI structures on the NHS, on and off ramps, and bridges that cross a state border. TAMPs are specifically for the population of NBI structures that are also in the NHS. The performance measures are required irrespective of the structure owner. Exhibit 26 below displays all these structures

in NBI and NHS. Also, federal regulations require states to establish targets for their NBI structures on the NHS and to report their progress toward those targets. Exhibit 24 below shows Virginia's state targets and status as taken from the VDOT's FY 23 State of Structures and Bridges report, with the addition of the Richmond Regional TPO's current percentage of deck area.

Performance Management Measures for Poor (SD) Structures:

- **No more than 10% of the deck area of NBI structures on the NHS may be Poor (SD)**
- **Each state must establish 2-year and 4-year goals for the percentage of Poor (SD) deck area of NBI structures on the NHS.**

Exhibit 23: % Deck Area Condition in NBI and NHS

% Deck Area on the NBI and NHS								
Good Condition			**Fair Condition**			**Poor Condition**		
2022	2023	2024	2022	2023	2024	2022	2023	2024
RRTPO								
9.5%	7.0%	6.50%	86.0%	88.9%	87.36%	4.5%	4.1%	4.20%
Virginia								
29.2%	28.8%	10.17%	68.0%	68.5%	86.11%	2.8%	2.7%	3.72%

Exhibit 23 above shows the past status for percentage of deck area in good, fair, and poor condition both within the RRTPO as well as the state as a whole. In addition to the past performance, the state of Virginia also sets a target for the upcoming year. The state of Virginia's 2025 target for percentage of deck area in good condition is 25.1%, and the target for percentage of deck area in poor condition is 3.6%.

The percentage of "Poor" and "Cusp" NBI & NHS structures by jurisdiction and highway system can be found below in Exhibit 25.

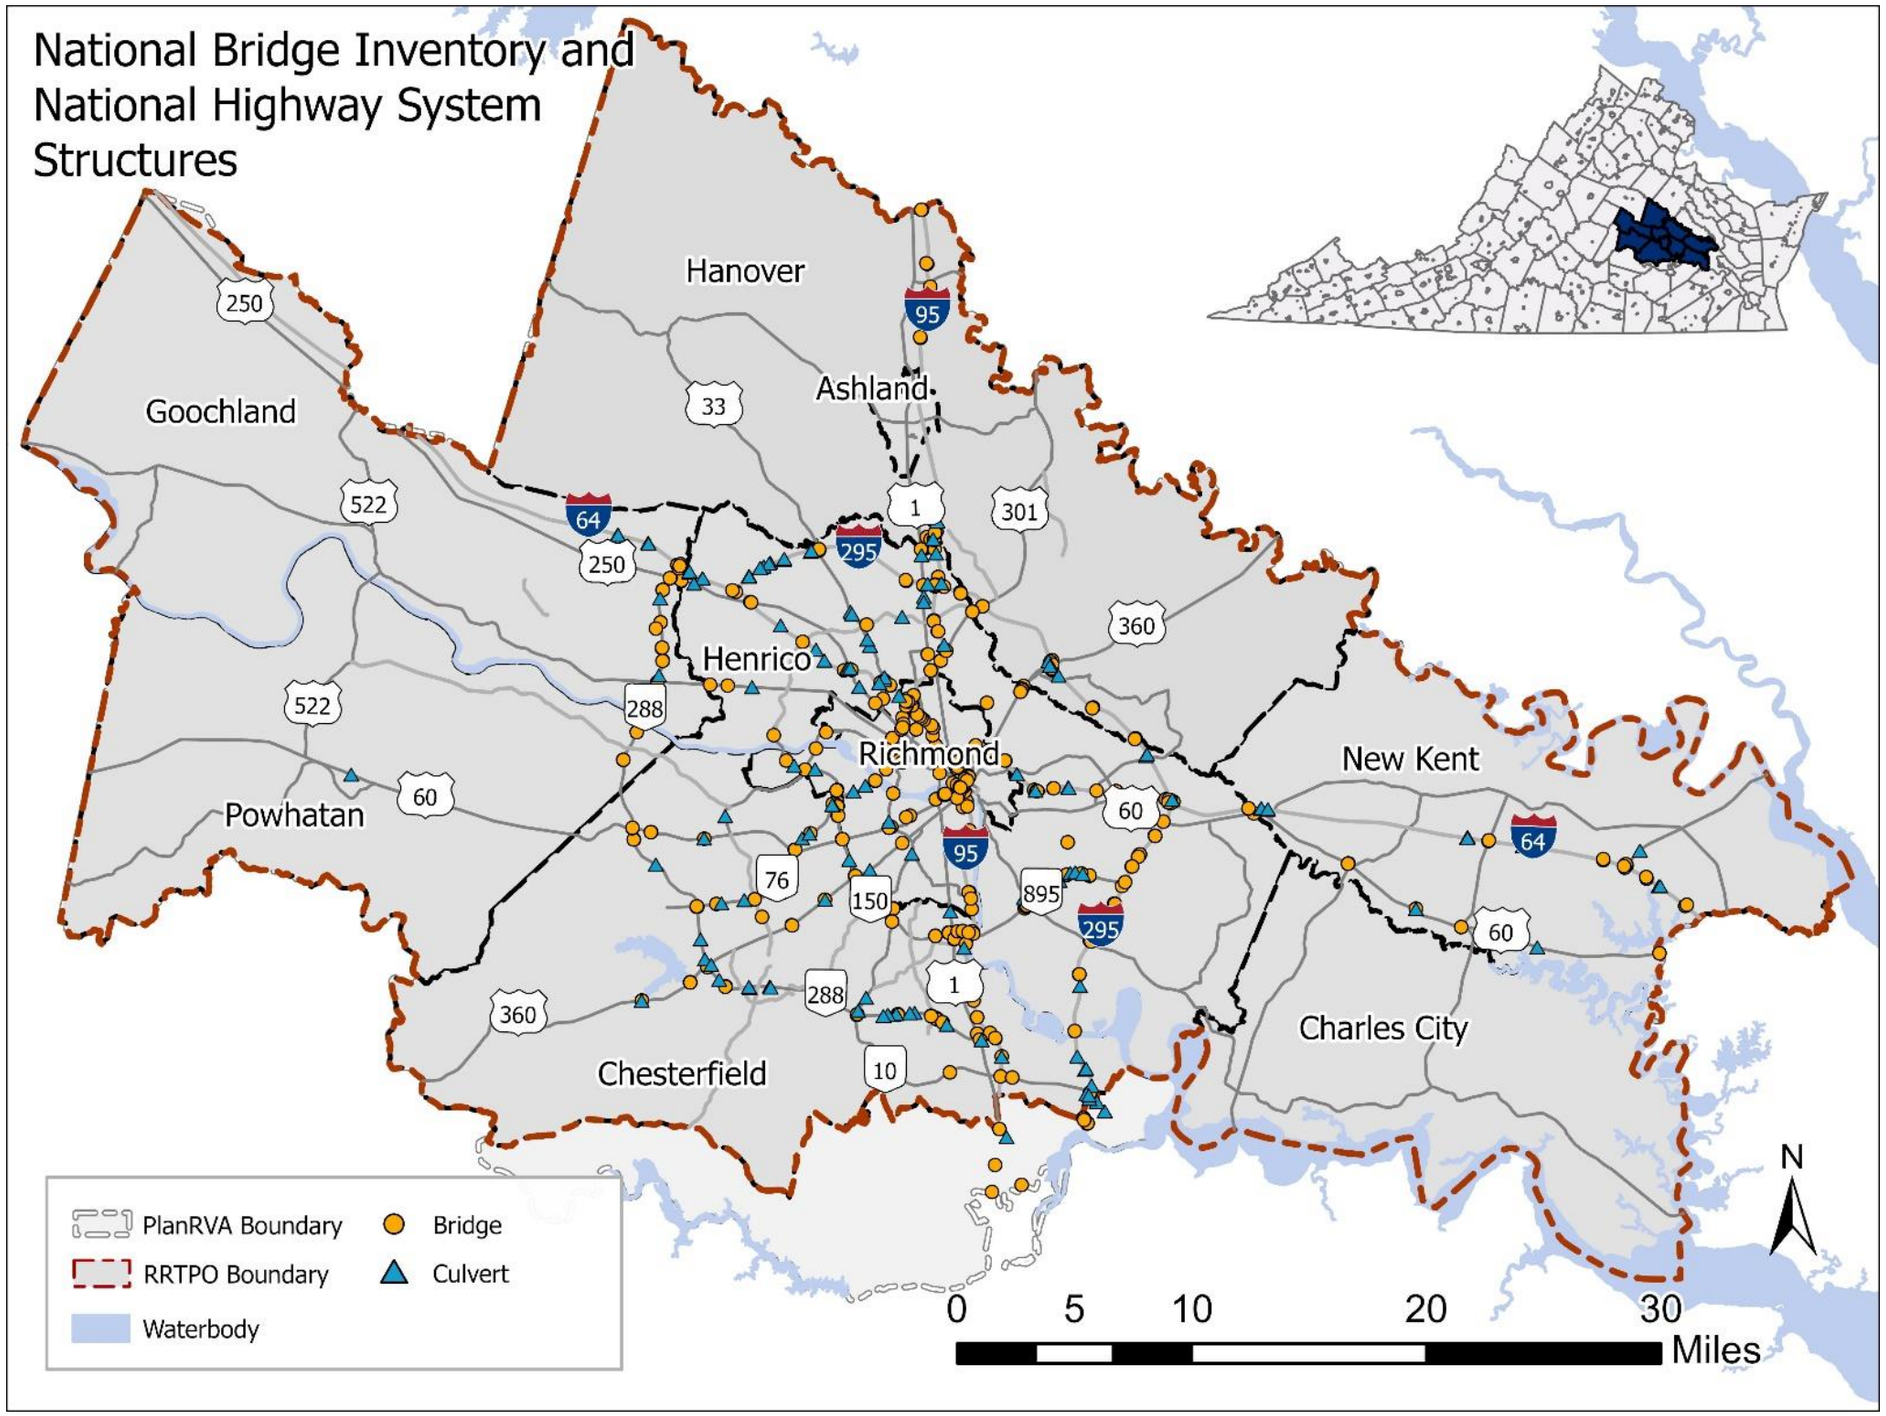

Exhibit 24: Federal and State Performance Measure Targets

Condition	Virginia's 2-year Target 2023	Virginia's 4-year Target 2025	Federal Limit	Current Status for Virginia	Current Status for Richmond Region
Good	>27.2%	>25.1%	-	29.1%	10.2%
Poor	<3.3%	<3.6%	<10%	2.8%	5.0%

Exhibit 26: Bridges and Culverts in the NBI & NHS in the Richmond Region

5. State of Good Repair (SGR) Program

Code of Virginia (§ 33.2-369) defines Virginia's State of Good Repair (SGR) program as "improvement of deficient pavement conditions and improvement of structurally deficient bridges." The Code states that the program provides funding for "reconstruction and replacement of structurally deficient state and locally owned bridges and reconstruction and rehabilitation of pavement on the Interstate System and primary state highway system determined to be deteriorated by the Board, including municipality- maintained primary extensions." The SGR overview provided by VDOT succinctly states that "Bridges eligible for SGR funding are Structurally Deficient Structures in the National Bridge Inventory (NBI).[1]

While the SGR program is a valuable tool for caring for the many bridges and culverts in the RRTPO it is important to keep in mind it is not a singular bridge replacement program, nor is it intended to pay for increases of traffic capacity of a bridge. VDOT urges those seeking SGR funding to have project scopes that outline ways to "rehabilitate, reconstruct, or replace deficient elements in the most practical and cost-effective manner" while also including steps to actively mitigate future deterioration of the structure.[2]

How are projects funded? [3]

Funding for transportation projects in the Commonwealth of Virginia comes through the Commonwealth Transportation Fund. The Commonwealth Transportation Fund (CTF) is made up of dedicated state and federal funding sources. State revenues for the CTF are based on Virginia's official revenue forecast, which is developed by the Department of Taxation. VDOT and the Department of Rail and Public Transportation (DRPT) estimate their federal revenues from the Federal Transit Administration as well as the Federal Highway Administration. Additional funding sources in the CTF go to transportation authorities and commissions in Northern Virginia, Central Virginia, and Hampton Roads. Revenues from the CTF and other specifically dedicated funding support the Six-Year Financial Plan which is adopted by the Commonwealth Transportation Board (CTB). In this funding the priority of this funding is to maintain existing infrastructure and is largely funded through the plan's Highway Maintenance and Operating Fund. After maintenance and other programs and needs are funded, 30% of VDOT's budget is allocated to State of Good Repair of structures and pavement.

Funds from the State of Good Repair program are to be allocated to projects in all nine highway construction districts (Culpeper, Staunton, Salem, Fredericksburg, Lynchburg, Northern Virginia, Richmond, Hampton Roads, & Bristol) based on the priority ranking system approved by the CTB.

To develop a "priority ranking system" for the allocation of SGR funds, CTB approved the project prioritization process methodology including the scoring formula on May 16, 2018. The most up to date priority ranking system was updated on July 1, 2024. The formula is based on five factors: Importance, Condition, Design Redundancy, Structure Capacity, and Cost Effectiveness. Each factor is individually calculated first and then multiplied by a "weighting" coefficient to obtain the final SGR Rank Score, ranging from 0.00 to 1.00. These five factors with weighting coefficient and description are summarized in Exhibit 27. Note that coefficients are selected to prioritize agency goals and may be adjusted in future years by the CTB as priorities change. More detail about the methodology can be found in the below link.[4] The 2024 update highlights the change to the Importance Factor in the prioritization formula to show "Fair (5)" rated structures as "Cusp" and to include them in the formula.

Exhibit 27: VDOT's formula for SGR

SGR Factor	Weight	Description
Importance	30%	measures the relative importance of each bridge to the overall highway network
Condition	25%	measures the overall physical condition of each bridge based on the condition of each individual element
Design Redundancy	15%	measures four important risk factors: Fracture Critical (redundancy), Scour Susceptibility, Fatigue, and Earthquake vulnerability
Structure	10%	measures the capacity of the structure to convey traffic, including the effects of weight restrictions, vertical clearance and deck width
Cost-Effectiveness	20%	measures the cost-effectiveness of the required work

6. FY 2025 State of Good Repair List of Eligible Projects

At the time this report was written the final selection of State of Good Repair Bridges for FY 2025 has not been made. While we wait for the final decision later in the fall VDOT has released a draft list of eligible structures spanning FY 2025 through FY 2030. The tables below, Exhibits 28 and 29, show VDOT's provided list of eligible State of Good Repair projects.

Exhibit 28: FY 26-31 State of Good Repair Eligible Bridges– Locality Owned

Appendix B: VDOT Bridges and Culverts General Condition Rating

General Condition Ratings (GCRs): In accordance with the requirements of the National Bridge Inventory (NBI), General Condition Ratings are assigned by the structure inspection team after each bridge inspection. These ratings are included in each inspection report to describe the current physical state of the bridge or large culvert. Evaluation is based on the physical condition of the structure at the time of inspection. Separate GCR values are assigned to the deck, superstructure, and substructure components of a bridge. A large culvert receives a single GCR.

The GCRs are assigned based on a numerical grading system that ranges from 0 (failed condition) to 9 (excellent condition). The table below describes the general condition ratings. The figures in the following pages provide illustrative examples of these ratings.

Condition		Code	Description
		N	NOT APPLICABLE
GOOD	**Excellent**	**9**	EXCELLENT CONDITION
	Very Good	**8**	VERY GOOD CONDITION: No problems noted.
	Good	**7**	GOOD CONDITION: Some minor problems.
FAIR	**Satisfactory**	**6**	SATISFACTORY CONDITION: Structural components show some minor deterioration.
Cusp	**Fair**	**5**	FAIR CONDITION: All primary structural elements are sound but may have some minor section loss, cracking, spalling or scour
POOR (Formerly-SD)	**Poor**	**4**	POOR CONDITION: Advanced section loss, deterioration, spalling or scour.
	Serious	**3**	SERIOUS CONDITION: Loss of section, deterioration, spalling or scour have seriously affected primary structural components. Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present.
	Critical	**2**	CRITICAL CONDITION: Advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken.
	Imminent Failure	**1**	"IMMINENT" FAILURE CONDITION: Major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic but corrective action may put back in light service.
	Failed	**0**	FAILED CONDITION: Out of service - beyond corrective action.
