**Transportation Planning Manager**

# Socioeconomic Data Purpose

The Socioeconomic Data (SE) provides estimates and projections of population, employment and other socioeconomic data of the Richmond Region within small geographic areas called Transportation Analysis Zones (TAZs), Jurisdictional and Regional Levels.

**TAZ Level**

**Jurisdictional Level**

**Regional Level**

**SE Data is an input into the RRTPO's Regional Travel Demand Model (The RTC Model)**

# Socioeconomic Data Purpose

The RTC Model is a major analytical tool used in the development of the Long-Range Transportation Plan (LRTP) Development Process.

The RTC Model and the underlying SE Data will also be a major analytical tool in the Richmond Region's First Scenario Planning Process.

# Methodology

- 2050 Horizon year baseline data developed using 2017 data (ignoring Covid implications) and reviewing the Census 2020 population numbers.
- 2017 Base year data approved by RRTPO Policy Board on September 5, 2019.
- Top-Down Approach. Developed Jurisdictional Control total first, then distributed to TAZs.
- Distributed to TAZs based on current trends.
- Population and Employment two independent projections. Other attributes directly dependent on population.
- 2050 growth distribution aligns with locality Comprehensive Plans.
